

# Gear Coupling

Every detail of the Dodge® gear coupling has been meticulously designed to improve coupling operation and reduce downtime. The ISO Class 10.9 hardware allows for reliable torque transmission. Hex nuts are held in place by the coupling hub for quick and easy installation, while the hub itself delivers more bore capacity compared to competitors. This allows for coupling downsizing.

### Easy to install

- Captured hardware allows for lower installation time compared to competitors
- Interchangeable with AGMA 9008 gear couplings

### Long lasting

- High-strength bolts for peace of mind
- Dodge coupling-certified components available for quick maintenance

### Extended equipment life

- High-strength steel provides higher torque and bore capacity than competitors
- Smaller footprint reduces overhung bearing load compared to competitor AGMA 9008 gear couplings

**Increased Torque Capacity**

Head-to-head against AGMA gear couplings, our gear coupling can be downsized based on torque ratings.

**Increased Bore Capacity**

Head-to-head against AGMA gear couplings, our gear coupling can be downsized based on bore capacity.

Ordering information: Standard gear couplings may be orders in 3 different assemblies -

- (1) **Flex-flex** (or full flex): To order a complete flex-flex coupling you need - (2) flex hubs [reborable], (2) sleeves [includes seal], and (1) hardware kit.
- (2) **Flex-rigid**: To order a complete flex-rigid coupling you need - (1) flex hub [reborable], (1) sleeve (includes seal), (1) rigid hub [reborable], and (1) hardware kit.
- (3) **Rigid-rigid**: To order a complete rigid-rigid coupling you need - (2) rigid hubs [reborable], and (1) hardware kit.
